

Project 1 reviews are up — and we're adding a catch-up session on Tue 08/09

01-ml-project — Customer Segmentation · 4 September 2026

Your final review for 01-ml-project is now in the repo. I read every notebook myself, so these are my notes, not your mentor's.

Find yours

```
git pull origin main
```

Then open `submissions/a3-tue-sat/<your-group-id>/01-ml-project/<your-group-id>_final-review.md`

There is also a personal note to your team at the end of every review. Please read it.

Where A3 stands: two groups submitted, three didn't

a3-g01 and a3-g03 are both accepted, and a3-g03 is the strongest submission in either cohort — I'll be showing it to the next intake.

a3-g02, a3-g04 and a3-g05 have no folder, branch or pull request in the repo. Nothing arrived.

If you didn't submit

Catch-up deadline — Monday 07/09, end of day. Push a notebook to `submissions/a3-tue-sat/<your-group-id>/01-ml-project/<your-group-id>_01-ml-project.ipynb`, built against `01-ml-project/SUBMISSION_CRITERIA.md`. You'll present at **S13, Tue 08/09**.

Three of five groups missing isn't a group problem, it's a signal about something I set up. **If the brief, the git workflow, the timeline or repo access is what stopped you, tell me today** — directly, or in the comments. I'd rather change how Project 2 is run than watch this repeat. That is a genuine offer, not a formality.

S13 — Tuesday 08/09

- a3-g02, a3-g04, a3-g05 present, if you deliver by Monday.
- a3-g01 takes a short slot to re-present its justification for choosing k.
- a3-g03 is closed out — but come if you can, because the two of you are the point of the session.

Here's why that pairing is worth your time. Both groups chose **k=4**, and both faced the same awkward fact: on this dataset, silhouette actually peaks at k=2, and k=4 scores *worst* in the sweep on two of the three metrics. a3-g03 said so plainly and argued k=4 was still the right business call. a3-g01 wrote it up as though the metrics agreed — they didn't.

Same decision, same evidence, two different write-ups. Being straight about what your numbers *don't* support is worth more marks than a clean-looking story, and it's the single most valuable habit in this project.

Questions on your own review come to me directly — your mentor's stage is finished.

— Hozaiifa Moustafa
